

PHP MySQL JOIN + GROUP BY + HAVING Problem Solving Questions (30)

These questions are based on real production-style scenarios using PHP + MySQL.

Database Tables Used

users

id	name	email
1	Raju	raju@gmail.com
2	Amit	amit@gmail.com

categories

id	category_name
1	Electronics
2	Fashion

products

id	product_name	price	user_id	category_id
1	Laptop	50000	1	1
2	Mobile	20000	1	1
3	Shirt	1000	2	2

orders

id	user_id	total
1	1	70000
2	1	1000
3	2	2000

INNER JOIN Questions (1–10)

1. Show all products with user name.

Expected Columns:

- product_name
 - user_name
-

2. Show all products with category name.

Expected Columns:

- product_name
 - category_name
-

3. Show products with both user and category.

Expected Columns:

- product_name
 - user_name
 - category_name
-

4. Show all orders with customer names.

Expected Columns:

- order_id
 - customer_name
 - total
-

5. Find products created by user "Raju".

6. Show products belonging to Electronics category.

7. Show all users who created products.

(Hint: INNER JOIN only matched data)

8. Find orders above 5000 with customer names.

9. Show products price between 1000 and 30000 with category names.

10. Count total products created by each user using INNER JOIN.

Expected:

| user_name | total_products |

LEFT JOIN Questions (11–20)

11. Show all users and their products.

Even users without products should appear.

12. Find users who have no products.

(Hint: NULL checking)

13. Show all categories and products.

14. Find categories without products.

15. Show all users and total orders.

Expected:

| user_name | total_orders |

16. Find users who never placed orders.

17. Show all products and their order details.

18. Show all categories even if no products exist.

19. Show users and latest order amount.

20. Find products not assigned to any category.

GROUP BY Questions (21–25)

21. Count products category-wise.

Expected:

| category_name | total_products |

22. Find total order amount user-wise.

Expected:

| user_name | total_amount |

23. Find average product price category-wise.

24. Find maximum order amount for each user.

25. Find minimum product price category-wise.

HAVING Questions (26–30)

26. Show users having more than 2 products.

(Hint: GROUP BY + HAVING)

27. Show categories where average product price is greater than 10000.

28. Find users whose total order amount exceeds 50000.

29. Show categories having more than 5 products.

30. Find users with minimum 2 orders.
