

PHP OOPs – 12 Assignment Questions

These assignments will help you understand **Class, Object, Constructor, Inheritance, Polymorphism, Interface, Abstract Class, Traits, Static Methods, and Exception Handling** in PHP.

Beginner Level (1-5)

1. Student Class

Create a `Student` class with properties:

- `id`
- `name`
- `email`

Methods:

- `addStudent()`
 - `displayStudent()`
-

2. Employee Class

Create an `Employee` class with:

- `name`
- `salary`

Method:

- `calculateAnnualSalary()`
-

3. Rectangle Class

Create a `Rectangle` class.

Methods:

- `area()`
- `perimeter()`

4. Bank Account Class

Create a `BankAccount` class.

Methods:

- `deposit()`
- `withdraw()`
- `checkBalance()`

5. Product Class

Create a `Product` class.

Properties:

- `productName`
- `price`
- `quantity`

Method:

- `totalPrice()`

Constructor & Destructor (6-8)

6. User Class

Create a `User` class using Constructor to initialize:

- `name`
- `email`

Display user details.

7. Car Class

Create a `Car` class.

Properties:

- brand
- model
- year

Initialize data using Constructor.

8. Database Connection Class

Create a class that prints:

Database Connected

inside constructor and

Database Connection Closed

inside destructor.

Inheritance (9-12)

9. Person → Student

Create a `Person` class.

Child class:

- Student

Display student details.

10. Employee → Manager

Manager should inherit Employee and add:

- department
- bonus

Calculate total salary.

11. Animal → Dog

Parent:

- makeSound()

Child:

- bark()
-

12. Shape → Circle

Parent:

- displayShape()

Child:

- calculateArea()

Bonus Production-Level Tasks

Task 1

Build a **Student Management System** using OOP.

Task 2

Build an **Inventory Management System**.

Task 3

Build a **Blog Management System**.
