

Table: `users`

Assume this structure:

```
users (  
  id INT,  
  name VARCHAR(100),  
  email VARCHAR(100),  
  age INT,  
  status VARCHAR(20),  
  salary INT,  
  created_at DATETIME  
)
```

30 Practice Questions and solving The Questions

BASIC SELECT

1. Get all users
 2. Get all users with only name and email
 3. Get user with id = 5
 4. Get users where name = 'Raju'
 5. Get all users ordered by id descending
-

WHERE CONDITIONS

6. Get users where age > 25
 7. Get users where salary < 30000
 8. Get users where status = 'active'
 9. Get users where age between 20 and 30
 10. Get users where salary between 20000 and 50000
-

MULTIPLE CONDITIONS

11. Get users where age > 25 AND status = 'active'
 12. Get users where age < 18 OR status = 'inactive'
 13. Get users where status = 'active' AND salary > 40000
 14. Get users where age > 30 AND salary < 50000
-

SEARCH & FILTER

- 15. Get users where name starts with 'A'
 - 16. Get users where email contains 'gmail'
 - 17. Get users where name ends with 'kumar'
 - 18. Get users where name contains 'raj'
-

NULL & SPECIAL

- 19. Get users where email is NULL
 - 20. Get users where salary is NOT NULL
-

AGGREGATE

- 21. Count total users
 - 22. Get maximum salary
 - 23. Get minimum age
 - 24. Get average salary
-

UPDATE

- 27. Update status to 'active' where id = 10
 - 28. Increase salary by 5000 where status = 'active'
-

DELETE

- 29. Delete user where id = 5
- 30. Delete users where status = 'inactive'
